

Cyber Minutes Weekly

"Hard to breach"

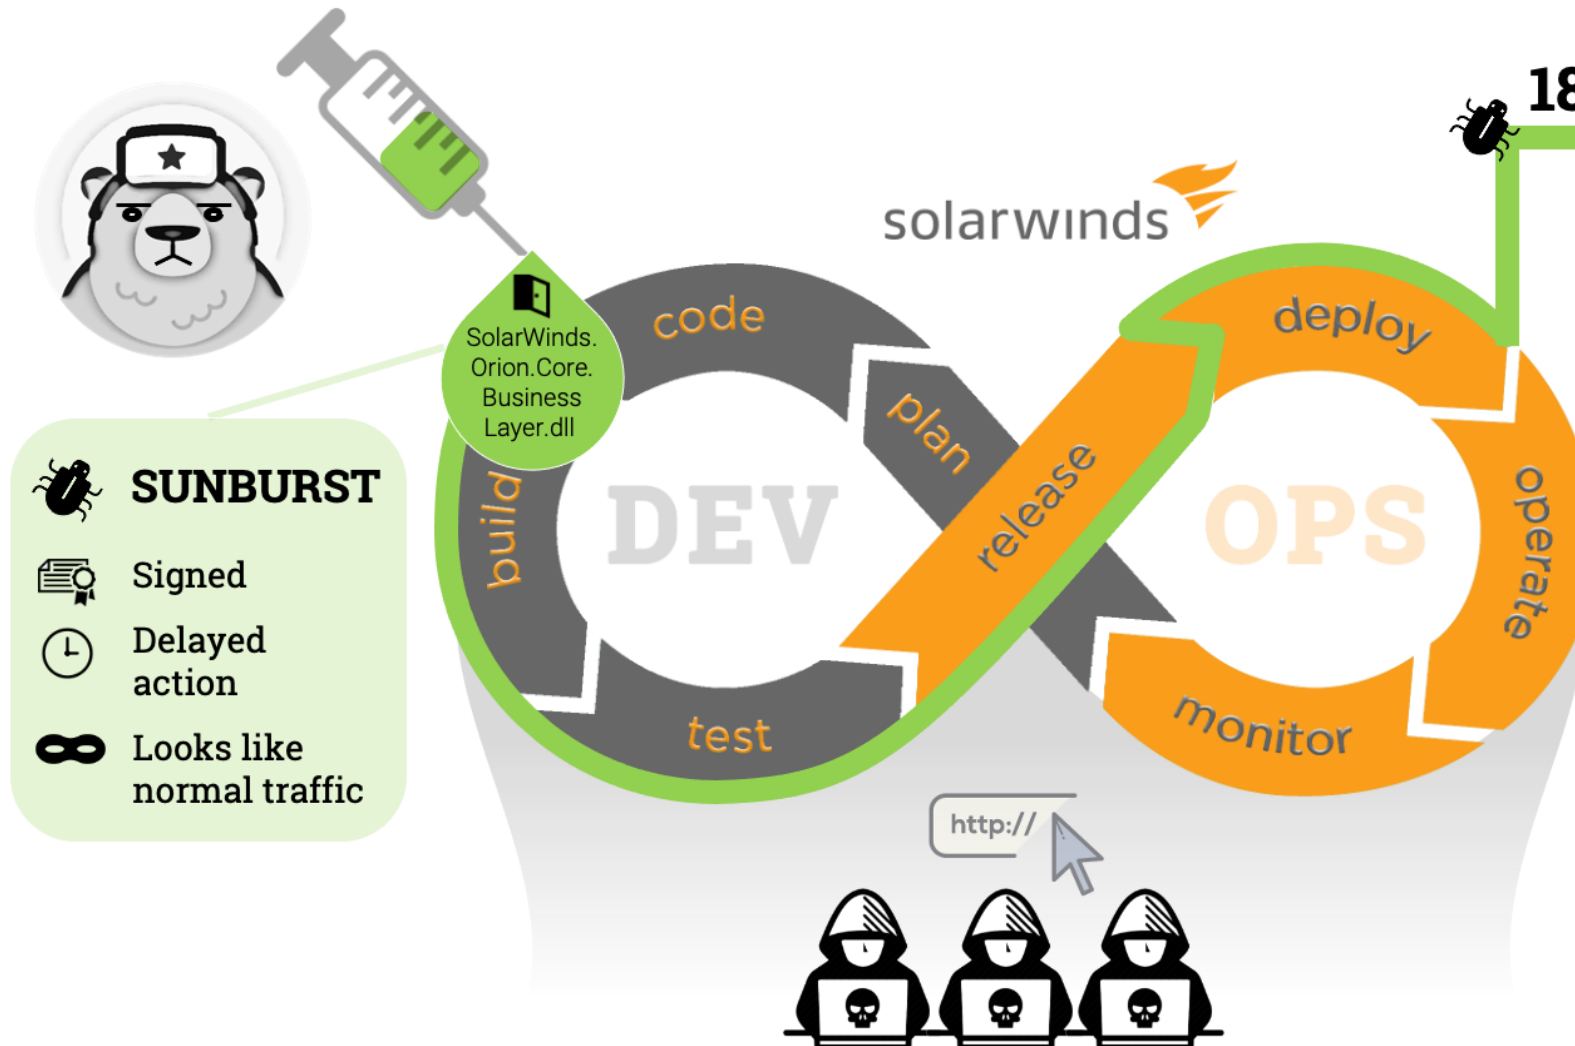

SolarWinds Hack

- Company and CISO recently charged as a result of the 2020 supply chain attack
- Believed that 18,000 customers downloaded the infected update
- Attack spanned the period of years, as early as Jan 2019 – Dec 2020
- Supply chain attack on the source code of trusted software
- Major lessons learned when it comes to creating secure code builds

Protect Your Software Supply Chain

18,000 Customers Affected

- Over 425 of the U.S. Fortune 500
- The top ten U.S. telcos
- All five branches of the U.S. military
- The top five U.S. accounting firms
- The Pentagon
- The State Department
- The National Security Agency
- The Department of Justice
- The White House

SolarWinds Stock Price

Major ServiceNow Concern

- Misconfiguration in widget allowed unauthenticated access to data
- Affects around 70% of total instances
- Types of data exposed include PII and internal documents
- No direct leaks have been attributed to date

Passwords and Social Engineering

80% of confirmed breaches are related to stolen passwords

Users who don't use password managers are 3x more likely to experience identity theft

Most common password for 2023 is "123456"

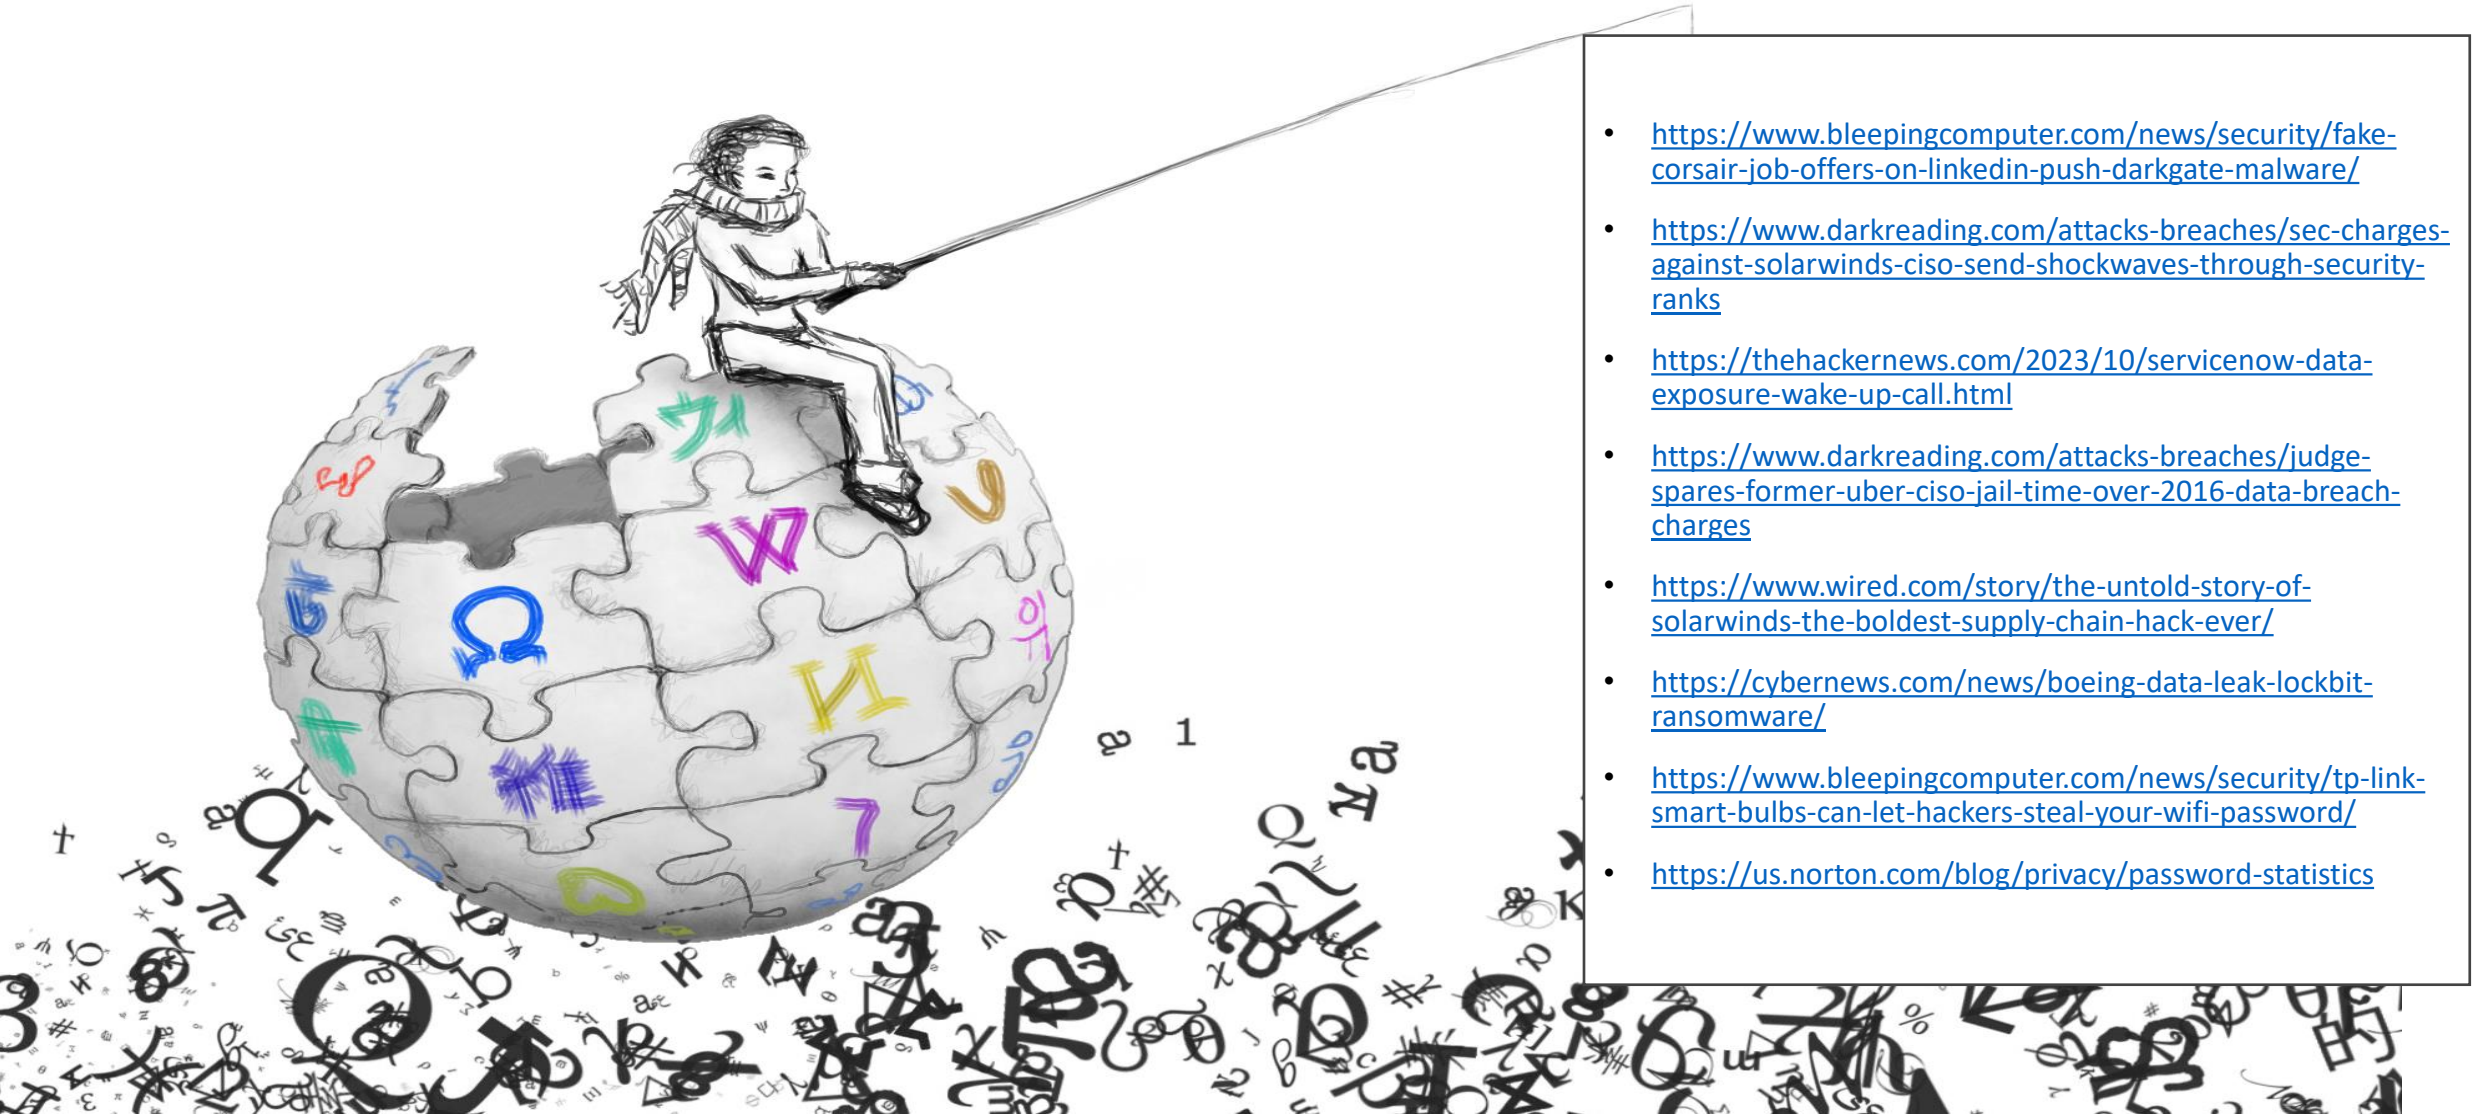

More than 1 in 4 individuals are unsure when they last changed their email password

Watch out for fake job offers on LinkedIn using social engineering tactics to spread malware
